ABSTRACT:

PURPOSE: To provide a drum brake excellent in durability and handling by preventing the generation of the brake noise without deteriorating the braking function as the brake drum.

CONSTITUTION: Lining pieces 41 of a plurality of kinds of different coefficient μ of friction are stuck to a shoe body 21 so that the relationship between the angle θ_2 of contact at the contact surface (surface of friction) of a lining 4a of a brake shoe 2a with a brake drum and the angle of friction $\theta_1 = \tan^{-1} \mu$ of contact may be θ_1 /FONT
